# LEDERLICKER ND

[lederplusquimica@lederplus.com](mailto:lederplusquimica@lederplus.com)

## **PROPERTIES**

<b>COMPOSITION:</b>	Mixture of synthetic products with natural solubilized fats.
<b>APPEARANCE:</b>	Brownish transparent, viscous, readily pourable oil.
<b>IONICITY:</b>	Anionic
<b>pH OF 10%:</b>	5 - 6
<b>SOLUBILITY:</b>	Readily emulsifiable in warm water.
<b>STORAGE STABILITY:</b>	At least 1 year if stored under suitable conditions.

## **USES**

LEDERLICKER ND is an all-round fatliquoring agent for clothing leather as suede, nappa and double-face. It can be used alone or in combination with other fat substances.

When used alone, LEDERLICKER ND produces very finely divided, stable and homogeneous emulsions which readily penetrate into the leather fibres. There it acts separating them and hindering their subsequent union during the drying. This produces morbid and light skins.

When the product is used as the chief fatliquoring component, a dry flesh side suitable for buffing is obtained even at high concentrations.

## **APPLICATION**

LEDERLICKER ND is applied after neutralisation in double-face and other types of leather with intermediate dry. In otherwise, in the dye phase. Usual percentages: double-face 110-140 g/skin (calculated on entfrefino), nappa and velour 6-10 % calculated on the shaved or wring aut weight of the leather.
